

TRANSMISSION SCHEME WITHIN A COMMUNICATION SYSTEM**Abstract of the Disclosure**

5 To address the need for dispatch in a CDMA communication system, each
mobile unit (309, 319) and CBSC (301, 311) involved in a call are allowed to
establish an independent RLP session between them. Each session contains its
own unique RLP sequence numbers that are not shared. Reverse link sequence
10 numbers are passed from the source CBSC (301, 311) (serving the "talking"
mobile) to the target CBSC(s) (301, 311) (serving the "listening" mobiles).
However, instead of being directly used by the target CBSC(s) (301, 311) for its
forward link RLP sequence number, the sequence numbers passed to the CBSC
(301, 311) is translated to the existing target CBSCs (301, 311) current RLP
sequence numbers.
